

# PRISYM WM

**PRISYM WM offers those involved in waste and recycling programs an effective means of monitoring and managing every element of collections.**

## **Introducing PRISYM WM**

Prisym WM assists local authorities in enforcement of local policies regarding side waste and contamination, in educating residents about best practice in using the recycling services provided, and automates many manual laborious processes needed to manage non-presentation, bin repair asset tracking and more .

### What can PRISYM WM do for you?

There are a huge number of benefits to using PRISYM WM to monitor your operations. For example;

- Increased participation rates
- Reduced landfill costs
- Reduced contamination
- Targeted, timely and effective education messages
- Time and date proven enforcement messages
- Reduced admin and improved internal communications
- Fast, easy reporting on waste flows, participation, contamination, asset management and more
- Better understanding of what is happening by route, ward and individual addresses
- Improved asset management
- Reduced side waste rates
- Automation of non-presentation reporting

### These benefits are realized because of the following features within PRISYM WM:

- Detailed, time and date stamped data collection (including collections, non presentation, side waste, contamination, asset management and more)
- Geographical and behavioural data collection
- Campaigns module - run a campaign based on behavioural and geographical data

- Automated notices and job sheets
- Reports module - automated report generation

PRISYM WM doesn't involve a high implementation cost, most likely the IT system you are running will need very little upgrading.

### How does it work?

PRISYM WM is a software system run on desk top PCs and robust hand held mobile devices such as barcode or RFID scanners. Collections crews scan bins, boxes or any other containers and select from a simple menu on their scanners to record detail relating to that individual bin. This fast and intuitive system is easy to use and requires little operator training.

At the end of the day the scanners return to base and the data is downloaded into the PRISYM WM system. This data is then be used by the software to produce automatic notices, reports and other communications in relation to individual waste and recycling policies.

Training is given to the PRISYM WM users enabling them to quickly and easily produce detailed reports, send and receive job sheets, create copies of notices and run campaigns to house holders. Where enforcement notices are involved users have the advantage of time and date stamped proof of non compliance which can assist in the production of a full case history.

### Supporting Local Authorities

PRISYM WM is designed to support Local Authorities and their contractors in three key areas. Efficiency, education and enforcement. Let us demonstrate how by contacting the PRISYM WM team today.

**Are any of these things happening to you?**

- Your bin replacement costs are huge and you suspect many kerbside boxes are sat on tables at the local car boot or in children's bedrooms full of toys
- Your recycle is contaminated and you can't get a good price for it
- Your landfill costs are rising steeply every year and you are running out of ways to reduce it
- You send out blanket campaigns to encourage participation but they seem to have less and less effect
- You work with a local council affected by these issues and you want to add value to the services you offer them.

[www.prisymid.com](http://www.prisymid.com)

- You are introducing new policies on side waste or are about to start enforcing existing policies but have no system to support it
- Admin costs are rising with every change to your recycling and waste collection system and you need to automate
- The level of detail you need to report on is increasing and pulling together the information is taking longer and longer

**We can help!**

For more information please contact the PRISYM WM team.
